

Store Ops Daily Copilot

Every step, start to finish, including the current (2026) way to build the tool in Step 6 — an agent flow posting to Teams and archiving to SharePoint.

i

What You're Building

An agent that gives store managers today's numbers and drafts/sends the daily stand-up note, grounded in one data file, acting through one governed tool.

AGENT NAME	Store Ops Daily Copilot
ORCHESTRATION	Generative (AI-led)
KNOWLEDGE	Consumer_StoreOps_Data.xlsx
CUSTOM TOPIC	Draft Today's Store Stand-up
TOOL	Send Stand-up Note to Teams (agent flow → Teams + SharePoint)

Files & Where They Go

FILE / ITEM	GOES TO	USED IN
Consumer_StoreOps_Data.xlsx	Copilot Studio → Knowledge tab → Add knowledge → File	Step 3
"Store Ops Archive" SharePoint list	Create manually — see Step 6a for columns	Step 6

Before you start — confirm Environment Maker permission, Contribute access on the SharePoint site for the archive list, and that each store has a Teams channel to post into.

Set Up the Agent

Steps 1–3 — create the agent shell, pick how it reasons, and ground it in data.

1 Create Your Copilot Studio Agent

Open Copilot Studio (copilotstudio.microsoft.com), select **Create** → **New agent**, then configure:

AGENT NAME	Store Ops Daily Copilot
DESCRIPTION	Daily store-operations sidekick — sales vs target, footfall, conversion, NPS movement, staffing gaps, top product gaps; drafts the daily store stand-up note.
SOLUTION / ENVIRONMENT	Consumer Experience · Default environment
ICON	Use a recognisable colour and emoji or upload a brand icon

2 Choose Orchestration Mode

Under **Settings** → **Generative AI**, use **Generative Orchestration** (AI-led) so the agent can blend knowledge lookups with tool calls for store operations and daily stand-up.

3 Add Knowledge

Knowledge tab → **Add knowledge** → **File** → upload **Consumer_Store0ps_Data.xlsx**. Contains:

- Store metadata (store ID, store name, date)
- Traffic and sales (footfall count, conversion %, sales USD, sales vs target %)
- Customer signal (NPS score)
- Staffing (staff on shift, staff required, top gap, free-text stand-up note)

You can layer additional sources later — SharePoint sites, Dataverse, public web, or Graph connectors.

Behavior: Instructions & Topic

Steps 4–5 — tell the agent how to behave, then give it a reusable conversation flow.

4 Add Agent Instructions

Overview → Instructions — paste exactly:

You are the Store Ops Daily Copilot. You help two audiences:

- 1) Store managers running today's stand-up.
- 2) Regional managers comparing performance across stores.

Rules:

- Use the uploaded store ops dataset as your single source of truth.
- Keep replies brisk and action-led — managers are on the shop floor.
- For every store metric, lead with movement vs target (the 'so what').
- For the daily stand-up draft, call the 'Send Stand-up Note to Teams' tool rather than producing it as plain text.
- Flag any store where SalesVsTargetPct < -10% or StaffOnShift < StaffRequired.
- Treat staffing data as confidential — managers see their store, regionals see their patch.

5 Add a Custom Topic

Topics → Add a topic → Create from description:

Topic name: Draft Today's Store Stand-up

Description: Pulls today's store row, drafts a 4-line stand-up note (sales vs target, conversion, NPS movement, top gap) and offers to post it to the store's Teams channel.

Trigger phrases:

- Draft today's stand-up
- Stand-up note for store 014
- Write the morning brief
- Give me today's store update

Conversation steps:

- Identify the store (default to authenticated user's store) and today's date
- Pull today's row plus yesterday's row for comparison
- Compose 4 lines: Sales vs target · Conversion movement · NPS movement · Top gap
- Read the draft back to the manager; allow one round of edits
- Call 'Send Stand-up Note to Teams' to post into the store's team channel
- Confirm message link returned by the tool

Build the Tool (Current Method)

Step 6 — updated for 2026, using current Copilot Studio tool-building.

6a Create the SharePoint Archive List

SharePoint site → **New** → **List** → **Blank list** → name it **Store Ops Archive**. Add columns: **StoreID** (text), **Date** (date), **HeadlineMetric** (text), **StandupBody** (multi-line text), **TopAction** (text).

6b Build the Agent Flow

1. **Flows** → **New flow** → **Agent flow** (or describe it to the natural-language builder).
2. Trigger inputs: **StoreID**, **Date**, **HeadlineMetric**, **StandupBody**, **TopAction**.
3. Action: **Teams** — **Post message in a chat or channel** → the store's own Teams channel (resolve the channel from StoreID).
4. Action: **SharePoint** — **Create item** → list **Store Ops Archive** → map the fields.
5. **Respond to the agent** → outputs **TeamsMessageLink** and **ArchiveURL**. Confirm **Asynchronous response = Off**.
6. **Publish** the flow.

6c Attach It as a Tool

1. **Tools** → **Add a tool** → filter by **Flow** → select it → **Add and configure**.
2. **Name**: Send Stand-up Note to Teams. **Description**: "Posts the daily stand-up note in the store's Teams channel and archives it to SharePoint."
3. Under **Completion**, respond using **TeamsMessageLink** and **ArchiveURL**.
4. **Save**.

Original spec, for reference — Tool: Send Stand-up Note to Teams. Type: Microsoft Teams connector (Post message in channel) + SharePoint archive write. Posts the daily stand-up note as an adaptive card in the store's Teams channel and archives it to the store ops SharePoint library. Inputs: Store ID (from authenticated user); Date (defaults to today); Headline metric (string — typically Sales vs target %); Stand-up body (4-line markdown string); Top action for the day (string). Outcome: Returns the Teams message link and SharePoint archive URL — the manager can re-share or refer back later in the day.

Configure, Evaluate, Test, Publish

Steps 7–10 — lock down settings, prove quality, and ship it.

7 Configure Settings

Settings cog (top right) — four areas before real users touch the agent:

- **General** — confirm name, description, primary language
- **Generative AI** — orchestration mode, content moderation (start at Medium)
- **Authentication** — "Authenticate with Microsoft" so the agent runs as the signed-in user
- **Security** — review DLP policy, enabled channels, end-user authentication

8 Evaluate Your Agent

Analytics → **Evaluations** → **New evaluation** — "Store Ops Daily Copilot — Baseline v1". Score every response on Groundedness, Relevance, Accuracy.

Input: Which stores are below -10% vs target today?

Expect: Filters where SalesVsTargetPct < -10 for today; cites StoreID and StoreName.

Input: Show the NPS movement for store 014 over the last week

Expect: Returns store 014 rows for last 7 days, calculates day-over-day NPS deltas.

Input: Draft and send today's stand-up for store 014

Expect: Triggers Draft Today's Store Stand-up topic and calls Send Stand-up Note to Teams.

9 Test in the Test Pane

For each query, open **Activity map** to see: which topic/tool/knowledge fired, the inputs collected and outputs returned, citations to source rows, and per-step latency.

10 Publish to a Channel

Recommended for this build: Microsoft Teams — store teams already use it for daily comms. **Microsoft Teams (mobile)** is the primary channel for store managers on the floor; **Microsoft 365 Copilot** for regional managers comparing across stores; a **custom website** embed works for the store ops intranet for read-only views; a demo website is useful for showcase or training environments. Teams and M365 Copilot channels require tenant admin approval — plan for that lead time.

Try These Live

Sample queries to run once the agent is built — and what it replaces.

Today's Snapshot

- How is store 014 tracking vs target so far today?
- Which stores are below -10% vs target today?

Trends & Comparisons

- Show NPS movement for store 014 over the last week.
- Which store has the biggest staffing gap this week?

Governed Action

- Draft and send today's stand-up for store 014.
- Try a paraphrase: 'fire off the morning huddle note for my store'.

This agent replaces

- Manually pulling sales vs target from the BI portal
- Re-typing the stand-up note into Teams every morning
- Multiple WhatsApp threads chasing daily numbers

With

- Today's numbers and movement in chat
- Daily stand-up drafted and posted in one turn
- Cross-store comparisons for regional managers

Tip for real-world use — publish to Teams mobile first — store managers run their stand-ups from the shop floor, not a desk. Add a Power BI link in the adaptive card so the team can drill into any metric without leaving Teams.
