

Marketing Campaigns Copilot

Every step, start to finish, including the current (2026) way to build the tool in Step 6 — an agent flow filing a Planner task and notifying the marketing team.

i

What You're Building

An agent that answers campaign performance questions and captures structured campaign brief requests, grounded in one data file, acting through one governed tool.

AGENT NAME	Marketing Campaigns Copilot
ORCHESTRATION	Generative (AI-led)
KNOWLEDGE	Marketing_Campaigns_Data.xlsx
CUSTOM TOPIC	Request a Campaign Brief
TOOL	Create Campaign Brief (agent flow → Planner + Teams + SharePoint)

Files & Where They Go

FILE / ITEM	GOES TO	USED IN
Marketing_Campaigns_Data.xlsx	Copilot Studio → Knowledge tab → Add knowledge → File	Step 3
"Campaign Briefs" Planner plan	Create in Planner (or Teams → add Planner tab) with a bucket per region	Step 6
CampaignBriefs_SharePointList_Template.xlsx	SharePoint site → New → List → From Excel (optional reporting record)	Step 6
CampaignBriefFiled_AdaptiveCard.json	Paste into the flow's Adaptive Card field	Step 6

Before you start — confirm Environment Maker permission, and that a Planner plan for marketing requests already exists (or create one before Step 6).

Set Up the Agent

Steps 1–3 — create the agent shell, pick how it reasons, and ground it in data.

1 Create Your Copilot Studio Agent

Open Copilot Studio (copilotstudio.microsoft.com), select **Create** → **New agent**, then configure:

AGENT NAME	Marketing Campaigns Copilot
DESCRIPTION	Marketing managers track campaign performance and request new campaign briefs in conversation; demand-gen specialists get instant ROI views.
SOLUTION / ENVIRONMENT	Marketing Solution · Default environment
ICON	Use a recognisable colour and emoji or upload a brand icon

2 Choose Orchestration Mode

Under **Settings** → **Generative AI**, use **Generative Orchestration** (AI-led) so the agent can blend knowledge lookups with tool calls for marketing performance and campaign brief intake.

3 Add Knowledge

Knowledge tab → **Add knowledge** → **File** → upload **Marketing_Campaigns_Data.xlsx**. Contains:

- Campaign details (name, channel, region, owner, status)
- Time data (start date, end date)
- Investment (budget, actual spend)
- Performance (impressions, clicks, CTR, MQLs, SQLs, opportunities)
- Outcomes (pipeline generated, ROI)

You can layer additional sources later — SharePoint sites, Dataverse, public web, or Graph connectors.

Behavior: Instructions & Topic

Steps 4–5 — tell the agent how to behave, then give it a reusable conversation flow.

4 Add Agent Instructions

Overview → Instructions — paste exactly:

You are the Marketing Campaigns Copilot. You help two audiences:

- 1) Marketing managers reviewing performance across the portfolio.
- 2) Stakeholders requesting a new campaign brief.

Rules:

- Use the uploaded campaign data as your single source of truth for analysis.
- For analytical questions, calculate ROI as (Pipeline – Spend) / Spend.
- For new brief requests, call the 'Create Campaign Brief' tool.
- Always be clear about campaign status (Live / Complete / Planned / Paused).
- Never disclose another region's spend if the user is scoped to a region.

5 Add a Custom Topic

Topics → Add a topic → Create from description:

Topic name: Request a Campaign Brief

Description: Captures a structured campaign brief from a business stakeholder and files it as a Planner task for the marketing team to action.

Trigger phrases:

- I need a campaign for the new product
- Request a campaign brief
- Help me run a campaign in DACH
- We need marketing support

Conversation steps:

- Ask for: campaign objective, audience, region, target launch date
- Ask for budget envelope and preferred channels
- Summarise the brief back to the user and ask to confirm
- Call the 'Create Campaign Brief' tool to file the request
- Return the Planner task URL and the marketing PM assigned

Build the Tool (Current Method)

Step 6 — updated for 2026, using current Copilot Studio tool-building.

6a Set Up the Planner Plan

In Planner, create (or reuse) a plan such as **Marketing Campaign Requests** with a bucket per region. This is where new brief tasks will land.

6b Build the Agent Flow

1. **Flows** → **New flow** → **Agent flow**.
2. Trigger inputs: **Objective**, **Audience**, **Region**, **LaunchWindowStart**, **LaunchWindowEnd**, **Budget**, **Channels**.
3. Action: **Planner — Create a task** → plan **Marketing Campaign Requests**, bucket = Region → title from Objective.
4. Action: **SharePoint — Create item** (optional reporting record) → import **CampaignBriefs_SharePointList_Template.xlsx** via New → List → From Excel first if you want this record.
5. Action: **Teams — Post your own adaptive card as the Flow bot to a channel** → the marketing team channel → paste the contents of **CampaignBriefFiled_AdaptiveCard.json** into the Adaptive Card field, then replace each {{Placeholder}} with the matching field from Dynamic content.
6. **Respond to the agent** → outputs **PlannerTaskURL** and **AssignedPM**. Confirm **Asynchronous response = Off**.
7. **Publish** the flow.

6c Attach It as a Tool

1. **Tools** → **Add a tool** → filter by **Flow** → select it → **Add and configure**.
2. **Name**: Create Campaign Brief. **Description**: "Files a structured campaign brief and notifies the marketing team."
3. Under **Completion**, respond using **PlannerTaskURL** and **AssignedPM**.
4. **Save**.

Original spec, for reference — Tool: Create Campaign Brief. Type: Power Automate flow → Planner task + Teams notification + SharePoint record. Files a structured campaign brief and notifies the marketing team. Inputs: Objective (string); Target audience (string); Region (string); Launch window (date range); Budget envelope (number); Preferred channels (multi-select). Outcome: Returns the Planner task URL and assigned marketing PM.

Configure, Evaluate, Test, Publish

Steps 7–10 — lock down settings, prove quality, and ship it.

7 Configure Settings

Settings cog (top right) — four areas before real users touch the agent:

- **General** — confirm name, description, primary language
- **Generative AI** — orchestration mode, content moderation (start at Medium)
- **Authentication** — "Authenticate with Microsoft" so the agent runs as the signed-in user
- **Security** — review DLP policy, enabled channels, end-user authentication

8 Evaluate Your Agent

Analytics → **Evaluations** → **New evaluation** — "Marketing Campaigns Copilot — Baseline v1". Score every response on Groundedness, Relevance, Accuracy.

Input: Show me the top 5 campaigns by ROI
 Expect: Calculates ROI per row and returns top 5 with channel and region.

Input: Which channel generates most pipeline per euro spent?
 Expect: Sums pipeline and spend by channel, ranks by ratio, shows working.

Input: I need a brief for an EMEA security suite launch in Q3
 Expect: Triggers Request a Campaign Brief topic and calls the tool.

9 Test in the Test Pane

For each query, open **Activity map** to see: which topic/tool/knowledge fired, the inputs collected and outputs returned, citations to source rows, and per-step latency.

10 Publish to a Channel

Publish (top right) → **Channels**: Microsoft Teams (needs admin approval), Microsoft 365 Copilot, custom web embed, or Slack/Facebook/Telephony. Admin approval will not land inside a short workshop — the Test pane is your real finish line on the day.

Try These Live

Sample queries to run once the agent is built — and what it replaces.

Performance

- Top 5 campaigns by ROI, with channel and region.
- Which Live campaigns are tracking over 90% of their budget?

Funnel & Channel

- Show MQL to SQL conversion rate by channel.
- Which region has the strongest pipeline-to-spend ratio?

Brief Intake

- I need a campaign brief for a new product launch in DACH next quarter.
- Request marketing support for a partner co-sell event in Iberia.

This agent replaces

- Pulling reports from multiple ad platforms
- Email-based intake of campaign requests
- Hand-built ROI calculations

With

- ROI and pipeline impact answered in chat
- Structured briefs flowing straight into Planner
- Faster, more confident investment decisions

Tip for real-world use — use a single Evaluation test set with your tier-1 KPIs (ROI by channel, spend-to-pipeline, MQL → SQL rate). Run it before every prompt change so you catch regressions before stakeholders do.
